

SUMMER LINK

Science (K-8) Check out a book or do online research about your child's favorite animal. Talk about the life cycle, eating habits, environment. To take it a bit further, encourage your child to research a different animal and compare (same) and contrast (different) their characteristics. Allow your child to present this information to friends and family in a fun way. This is great way to develop reading, writing, and speaking skills while learning important science concepts.
