Math (K-8) Estimate, Guess and Check: Ask your child to guess how many coins are in a bag or jar. Is it 10? 20? 200? Have your kid count the coins in the container. Compare the guess and actual numbers. Was the guess too big or too small? Chart your child's estimate, actual number of coins and whether their guess was too big or too small. Older children may count the total amount of money in the container. Repeat the process until your child is in the ballpark!
