For clarification, let's look at option A. $4(4 + 20)$ is the same thing as $4 \times (4 + 20)$. Probability is the likelihood that something will happen. For example, if you flip a coin, there is an equal chance that the result will be heads or it will be tails. In other words, the probability of flipping heads is 1 out of 2 (1 side is heads out of a total of 2 possible sides). Also, the probability of flipping tails is 1 out of 2 (1 side is tails out of a total of 2 possible sides).

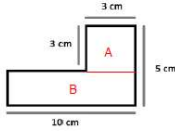

Based on this, see if you can answer the following questions.

Answer Key

from **Summer Slide** to **SUMMERSWING**

Day 30

Subtract:

$$8\frac{3}{5} - 1\frac{1}{2} =$$

7 1/10

Write the rule for this pattern:

2, 6, 18, 54, 162
multiply by 3

Find the area of each rectangle, then find the area of the entire combined shape.

Rectangle A: 240 sq ft
Rectangle B: 272 sq ft
Composite Figure: 512 sq ft

Add. Show answer in simplest form.

$$6\frac{3}{4} + 9\frac{2}{5} =$$

16 3/20

Multiply:

$$\begin{array}{r} 3,206 \\ \times 28 \\ \hline \end{array}$$

89,768

Find the value:

$$68.1 \times 0.24$$

16.344

Find the volume of the composite figure below.

2,592 cu ft
