

# Biology: Ecology Parent Guide

In this unit, your child will learn about the world around him or her and how we as humans impact our environment. Students will investigate and learn about animal interactions, how different living and non-living factors all play a role in our ecosystem. Students will also learn about how our actions such as driving, pollution, technological developments and even every-day energy use is affecting how we breathe and survive in this world. They will learn the difference between renewable and nonrenewable resources. Student will look at their individual actions and their “footprint” on the worldwide environment. Through this unit, we hope to open the students’ eyes on how they are creating and contributing to the world that we will live in for the future. We hope to create an awareness so that students can become global, responsible citizens for the environment.
